

2012 HAWK MIGRATION

NORTHEAST HAWKWATCH REPORT

The North East Hawk Watch promotes the systematic study of migrating hawks in New England, southeastern New York, and northeast New Jersey. The planning for NEHW activities is carried on by the Officers and a Board of Directors. Membership is open to anyone. Annual dues are \$10 payable to the treasurer: Joe Wojtanowski, PO Box 142, Poquonock CT 06064. Other officers: Paul Roberts, President - 254 Arlington St. Medford, MA 02155; Larry Fischer, Clerk, 124 Sugar Street, Newtown, CT 06470.

Visit the website for North East Hawk Watch at www.battaly.com/nehw/ to download a membership application, view seasonal site totals at all sites and daily counts at selected sites for 2012, download the entire Hawkwatch Report for 2011, and find directions to hawkwatch sites in the Northeast.

All counts can be easily reported online through a free service offered by the Hawk Migration Association of North America. To sign up, visit www.hawkcount.org and click the 'Account Request' link. To receive daily reports from all sites using the hawkcount program, subscribe to BIRDHAWK, which is also free and can be done by visiting the HMANA homepage at www.hmana.org and following the simple instructions there.

If you are unable to use this online reporting system, single day (hourly) white report forms and seasonal summaries of daily totals should be sent to the Report Editor by August 1 (spring)

and February 1 (fall). Please contact the Editor about any errors you may find in the data, dates, observer names, or watch locations. Contact your Regional Coordinator to obtain report forms or.

To support the work of the Hawk Migration Association of North America and receive the journal, Hawk Migration Studies, send a check for \$25 covering dues for one year to the Membership Secretary:

THE 2012 SPRING MIGRATION

COVERAGE AND SITE ACCOUNTS

Turkey Vulture, Cooper's Hawk, and Redshoulder did very well at **Sandy Hook**. but some other species did poorly, especially Osprey, Sharpshin, Kestrel, and Merlin. Most species at **Montclair** also continued at a low level for a second year, although counts were not as lean as 2008-2009. Only Turkey Vulture and Redtail improved over 2011, with Osprey and Redshoulder especially scarce. The Kestrel repeated its surprisingly healthy numbers of last year, and Bald Eagle, Cooper's Hawk and Merlin remained above average. The Broadwing and Sharpshin flights were disappointing. **Wildcat Ridge** coverage stayed steady after recent declines, but most species except Broadwing still were weak. Though **Hook Mt.** had a single great day in 2011, it was not enough to even try again in 2012. Hours dropped only a bit at **Barre Falls**, but numbers dwindled sharply for every species except Cooper's Hawk.

Total migrants and totals-per-hour were virtually the same as 2011 at **Pilgrim Heights**, but the distribution was much changed. Osprey, Cooper's Hawk and Redtail were more numerous, while Sharpshin, Kestrel and Merlin were fewer. Other species held steady, and the overall passage rate was identical. The Kestrel also declined dramatically at **Plum Island**, along with Merlin and accipiters. The Harrier, on the other hand, enjoyed its second straight superb flight.

Bradbury Mt. solidified its stature as THE watch site in the northeast, recovering from a slight downturn in 2011. The

Broadwing led the charge, but all species did well, with Bald Eagle setting a new record high. **Greenlaw Mt.** faltered in coverage and numbers followed suit. **New Horton Ridge** tried hard, matching the good coverage of its first year, but counts lagged for all species except Harrier and Merlin.

SPECIES ACCOUNTS

The **Broad-winged Hawk** declined for the second straight year and ended up below its ten-year average. For total counts, Bradbury Mt. regained first place with Montclair a distant, but unchallenged second.

The **Osprey** dropped again to a position well below its averages. Bradbury, Montclair, and Pilgrim Heights were the top three performers. The **Bald Eagle** managed another sterling result, though falling slightly below the 2011 record. Bradbury Mt. was first in numbers again, but New Horton was a good second. The **Northern Harrier** was in excellent numbers for the fourth year in a row, remaining well above its average. Plum Island, Sandy Hook and Bradbury were the top three sites.

The **Sharp-shinned Hawk** took another step lower, dropping below average. Sandy Hook did the best, Bradbury second. After a modest performance in 2011, the **Cooper's Hawk** returned to the high levels of 2009-2010. The Sharpshin/Cooper's ratio was only 4.6 to 1 compared to more than 7 to 1 in 2010 and 2011. The **Northern Goshawk** had its best year since 1992.

The **Red-shouldered Hawk** was close to its average, a far cry from the big flight of 2009. Sandy Hook far outpaced Montclair and Bradbury Mt. The **Red-tailed Hawk** surged to its peak at New Horton, but was also numerous at Bradbury and Pigirm Heights. The ratio of Redtail to Redshoulder rose to 4.1 to 1.

After the spectacular numbers of 2011, one might expect a correction for the **American Kestrel**, but the fallback was slight. Plum Island and Sandy Hook did well as usual, but Montclair and Bradbury contributed more than usual. The ratio was 4.8 Kestrels, to 1 Merlin. The **Peregrine** was exactly the same as it was in 2011 and very close to average.

The **Turkey Vulture** recovered from last year's poor showing, Nine **Mississippi Kites** and four **Golden Eagles** completed the roster.

FLIGHT ACCOUNT

February 18 - March 11

The last two weeks of February were mild and dry, but with plenty of north wind. Five migrants in five days went over Wildcat. Except for rain on March 3, the same conditions prevailed the first eleven days of March. Over that period six sites were covered on 13 days, producing 33 Redtails, 20 vultures, 14 Bald Eagles and five Redshoulders. Not much for 68 hours of effort.

March 12-24

This period was dry and warm with frequent south winds, resulting in a steady but modest movement of birds. Redtails led the way with a total count of 515, topped by 66 on March 19 at Montclair and 61 on March 21 at New Horton. There were 12 daily counts of 15 or more Redtails. Vultures were not far behind at 419, and 19 counts of 10-42 birds. Of the 116 Sharpshins, 43 were seen over New Horton March 21-22. There were 120 Redshoulders, 21 of them at Sandy Hook March 19, and 12 there on March 21. A total 68 Bald Eagles were topped by 13 on March 17, and 11 on March 20, both at Bradbury. Next highest species totals were 68 Osprey and 55 Cooper's Hawks. Over 312 hours and 54 days there were 1456 migrants, making a passage rate of 4.7 per-hour.

March 25- April 1

Flights dwindled the last week of March. Of the 580 birds counted, 187 were vultures and 82 were Kestrels. Seven other species ranged from 16 to 57 for the period. Highlights were 26 Redshoulders at Sandy Hook March 28 and 45 kestrels at Plum

Island March 30. The passage rate was 2.9 per-hour.

April 2-8

Early April is Kestrel time, and in 2012 almost half the migrants were this little falcon - 702 out of 1616. Sandy Hook had 269 April 2-5 and Plum Island counted 264 April 3-6. Montclair chipped in 89 April 4-5. Accipiters accounted for 295, with 114 at Sandy Hook April 3-4. April 4-5 was big for vultures, 90 at Sandy Hook and 74 at Pilgrim Heights, the bulk of the 266 in the period. Of the 86 Harriers, 39 went by Plum Island on April 5-6. The 78 Redtails were scattered in small numbers. There were 38 watch-days and 249 hours of coverage with a passage rate of 2.5 per-hour.

April 9-19

Suddenly it was Broadwing time. Thru April 8 only seven of them had been seen, but they came now despite cool weather and northwest winds. Montclair started the flight with 185 on April 9-10. Numbers were steady but moderate the next three days, but a classic wind switch and warmup April 14-16 brought an upsurge on April 16. It peaked at two sites at each end of the region, 209 at Montclair and 292 at Bradbury. The southern pulse reached Bradbury the next day with 367, the peak daily count of the season. April 16 at Bradbury was the best all-round flight day of the season, featuring 67 Osprey, 26 Harriers, and 114 Kestrels. Sandy Hook's count of 150 Sharpshins on April 15 was the only other highlight of the period. Over 74 watch-days and 470 hours there were 6033 migrants. Passage rate was 13.5.

April 19-May 15

Five days of clouds and drizzle April 20-24 slowed the procession, with modest numbers still proceeding north at a steady, but dispersed rate. That pace quickened only slightly when it turned clear and cold with northwest winds until the end of the month. Clouds and showers shut things down the first three days of May, and conditions remained wet and cool almost continually the next two weeks, interrupting and postponing decent flights much farther into the month than usual. Over the whole, long period highlights were few and modest, most notable 121 Broadwings at Montclair on May 1, 95 Sharpshins and 25 Merlins at Sandy Hook May 4. Watchers were on their stations for 117 watch days and 708 hours. The 4340 migrants gave us a dismal passage rate of 6.1, far below the previous three years and the average. Broadwings accounted for 42% of the total and accipiters 25%, figures close to those in 2011. Falcons, however, were only 10% a sharp drop from the 19% in 2011.

THE 2012 FALL MIGRATION

SITE ACCOUNTS

There were 44 sites reporting two or more days of coverage in 2012, up from 39 in 2011. Five had coverage greater than 500 hours, led by Chestnut Ridge with 723. Pack Monadnock reached the 600 mark and Lighthouse was just shy with 593. Three were over 400, six more over 300, and five between 180 and 278. There were eleven in the span from 47 hours to 148 and seven from 10 to 20.

Mt Agamenticus, a Maine site that was well covered until 1999, returned to the fold, though only during prime time. Little Round Top also returned with substantial hours. Cooper, Maine was a new site that did more than just a few hours, which is the case with five other watches. A major missing site was Oceanside on Long Island. The excellent new watch at Alna, Maine apparently was active, but did not report. Suffield was the only other loss.

NORTHEASTERN COASTAL SITES

In its third year **Greenlaw Mt** proved its value again, showing very improved totals for Vulture, Osprey and Redtail. On the other side Sharpshin and Broadwing fell far short of 2011 numbers. It was a very good year for Osprey, Merlin, and Peregrine at **Cadillac Mt**, and only Sharpshin and Redtail were notably weak, though the former was scarce enough to bring the passage rate down. Broadwing was above average, but not the super-flight that passed in 2011. Sharpshin also declined again at **Harpwell Peninsula**, the fourth year in a row. The Kestrel followed that pattern, and lower counts of most species the last two years were likely due to less coverage. The resurrected watch at **Mt. Agamenticus** reported modest numbers of all species, especially Sharpshin, Broadwing, and falcons. Sharpshin also brought down the otherwise typical numbers at **Pinnacle Rock**.

NEW HAMPSHIRE AND VERMONT

The **Carter Hill Observatory** increased coverage to over 400 hours and set many record high counts in its fifth year of watching. Only Turkey Vulture, Cooper's Hawk, and Broadwing

failed to match previous totals. This should prove to be the premier watch site that we have needed for central New Hampshire. Next up is a coastal watch. **Pack Monadnock**, continues to be the western New Hampshire jewel. After fewer hours in 2011, they returned to the high level of coverage of the previous year, and most counts matched or exceeded that year's totals. Biggest improvements were for Bald Eagle, Redshoulder, and Redtail, and all counts were well above the eight-year average. Farther west, **Putney Mt.** also enjoyed a stellar season, with best totals ever for Osprey, both accipiters, all three buteos, Merlin, and Peregrine. No species were on the down side of average.

INLAND MASSACHUSETTS AND UPPER HUDSON VALLEY

After two poor coverage years **Mt Wachusett** recovered its mojo and the big result was the best Broadwing flight since 2005. They had a record high Cooper's Hawk passage and decent numbers of most other species. There were no super highlights at **Barre Falls**, just a solid flight of most species, with weakness only for Harrier and Sharpshin. Another season of sparse coverage at **Mt Tom**, the oldest and most neglected watch site in New England. **Shatterack Mt.** suffered through a poor Broadwing flight, and other species were only a bit better, except for healthy numbers of Turkey Vultures and Peregrines. Results were also grim at **Blueberry Hill** where Bald Eagle, Harrier, Sharpshin, and Redtail were all at record low levels. The only bright spot was a record Peregrine total. It was a big year for the Broadwing at **Helderberg** with other species in good supply, including the first occurrence of Redshoulder.

CENTRAL AND WESTERN CONNECTICUT

There was minimal coverage at the **Poquonock** site, which means there is still no Connecticut coverage in the vital and often heavily used eastern portion of the flyway, southwest of Wachusett Mt. and Barre Falls. In the western hills, seven sites were active in 2012, with very comparable coverage ranging from 54 to 68 hours. A heavy Broadwing movement was detected at four of the five, with counts in the 2000-6000 range. **Johnnycake** had the most, nearly matching its 2006 total

followed by **Chestnut Hill**, which came close to its 2009 count. **Botsford Hill** exceeded its average, as it did for Osprey and Sharpshin, while **Middle School** was slightly on the low side, as it was for most other species. **White Memorial** watchers increased their effort, even into the late season, but numbers remained low.

SOUTHEAST CONNECTICUT AND LONG ISLAND

Lighthouse Point had few bright spots, basically only Bald Eagle and Peregrine, which both set records. Kestrel was again at about half of its long-term average, which follows a region wide trend. Oddly, Merlin also continued below its long term average, a trend not true in the region. Osprey and Harrier improved from 2011, but not nearly enough to take it out of recent doldrums. Sharpshin set a record low count, nearly 50% below the long-term average, a level it has been close to in four of the last five years. That compares to the 2012 region wide count that was less than 10% below a long-term average. However, the Cooper's Hawk, over a mere nine years, has risen to a point 95% above the 1994-2002 average, but the overall regional total only rose to 55% above its same average.

Decent coverage at **Boothe Park** continued for a third year. Osprey, Bald Eagle, and Redshoulder came through in much greater numbers. The Broadwing flight was very good even though it was almost half of the big count in 2011. The Harrier, both accipiters and Redtail were way down. Buteos put on a show at **Quaker Ridge**. It was their best flight for both Broadwing and Redtail since 1995, and the Redshoulder count was the best ever by far. They also counted three more Bald Eagles than the did for their previous high two years ago. Turkey Vulture numbers were also near the top. Slight increases for Osprey, Harrier, and Kestrel did not bring them up near average. Merlins were fewer, but still above the average.

LOWER HUDSON VALLEY

After a big year all around in 2011, **Chestnut Ridge** had lower counts for every major species except Bald Eagle, Redshoulder, and Kestrel, though the last was still below average. **Bear Mt** improved its numbers compared to 2011, but, except for Bald Eagle, was still much below the historical averages. What a difference a year made at **Hook Mt**. Last year legions of Broadwings, this year barely enough to be in the normal low category. Harrier, Sharpshin, Redtail, and Merlin also were in that low region. Turkey Vulture, Osprey, Bald Eagle, and Peregrine improved to above average. Cooper's Hawk faltered, but remained above average, Kestrel also improved but remained below that point.

It was an excellent year at **Summitville**, setting records for all three buteos. Turkey Vulture and Bald Eagle had big years and most other species did near average except Cooper's Hawk. Raptors flew over **Mohonk Preserve**, but were only counted on three days. Coverage declined at **Lenoir Preserve**, but it was enough to have decent, if not equal to average numbers. The continuing very high numbers of Turkey Vultures counted is cause for concern. It was the second year in a row for a superb flight of accipiters at **Mt Peter**. Redshoulders staged a record

flight, Redtail dropped to a bit below average, and Broadwing fell, but remained above average. Osprey also had a good season, and the Bald Eagle soared to set a record high in a very impressive fashion.

LONG ISLAND AND NORTHEASTERN NEW JERSEY

At **Fire Island** the Kestrel nearly doubled its 2011 total, but was still below average. Merlin and Peregrine also improved to stay above average. It was a very good year for Osprey, an improved one for Harrier, but a poor one for Sharpshin. The Broadwing flight was the best in a dozen years at **Montclair**, the Bald Eagle went over in record numbers, and the Redshoulder in super record numbers. All other species improved dramatically, the Kestrel even approaching its average. It was not enough to carry Harrier, Sharpshin, and Redtail to anywhere near a normal level. Broadwings did well again at **Wildcat Ridge**, while Bald Eagle set a record. All other species were in good supply except vultures and Redtails. Most species stayed steady and near average at **Picatinny Peak**, only Harrier and Cooper's Hawk showing weakness. The Redtail was below average, but after a disastrous count in 2011, that is good news. Broadwings finally funneled past **Chimney Rock** in big numbers again, the most since 2000. The other two buteos also did well, the Redshoulder in record fashion. It was also the most Bald Eagles, while most other species flirted with the average, excepting Harrier, Kestrel, and Peregrine.

SPECIES ACCOUNTS

A second year of good counts kept spirits and hopes high about the health of the **Broad-winged Hawk** population. It is still not a return to the days before 1996, but it continued the welcome relief from the often depressingly poor flights of 1996-2010. The 2011 flights seemed to take an easy route over central and western sites. In 2012, more westerly winds often drifted birds back over traditional eastern watches. Northwestern sites like Pack Monadnock and Putney still got good numbers, but the wind took over quickly and concentrated birds back towards the sea as they went south. Quaker Ridge and Chimney Rock benefited most from this classic scenario.

The **Osprey** finally jumped out of its nine-year groove, showing the best per-hour count since 2002, and a best absolute count since 1999. The 2011 pause in the relentless increase of the **Bald Eagle** was swept away by another burst of numbers in 2012. It was more than a 50% increase in one year. Harriers and Merlins were left in their wake. What is left for this remarkable success story? **Northern Harrier** had another poor flight after the stellar one in 2010. If early trends hold true, we are due for a good one in 2013.

The drop in **Sharp-shinned Hawk** numbers was not serious enough to give alarm, especially when it has stayed very close to the same per-hour average every year since 1996. The **Cooper's Hawk** declined slightly from the record high counts of the previous two years, but was good enough to extend its increases to a seventh year. This surge has been fueled by only three of the 17 full coverage long term sites.

American Kestrel recovered nicely from a poor flight in 2011. It has had some ups and downs since 2003, but there is nothing like the plunge that occurred from 1994-2003. In fact, it has held pretty steady over the recent period. Another slight decrease for the **Merlin** indicates how uncertain and gradual long-term increases usually are. The count amounted to a perfect average, continuing a mostly “rock-steady” per-hour passage since 2001. There are not many eagle stories in the world of raptors. The **Peregrine Falcon** also declined for the second straight year, supporting the idea that increases are usually slow and not always steady.

Now we turn to the large buteos, who have surprisingly been performing as poorly as their small cousin recently. However, 2012 was a turn-around year. The **Red-shouldered Hawk** exploded to a level almost double its average and 60% higher than the three previous high count years in 1995, 1999, and 2010. Three watches led the way, Quaker Ridge, Montclair, and Chimney Rock, indicating an unusually concentrated near-coastal passage of these buteos in 2012. The **Red-tailed Hawk** recovery was not as dramatic, but still impressive, increasing by 55% compared to 2011. That level was well above average for the first time in seven years. After a “killer” year in 2011 the **Turkey Vulture** numbers declined to a level “only” 32% above average. Clearly numbers are surging, even if not as much as the 2011 figures seemed to show.

FLIGHT ACCOUNT

August to September 8

There were 88 watch days and over 500 hours of coverage, but barely 900 migrants. The only highlight was a Mississippi Kite at Hook Mt. on 8/30. Peaks were 14-15 Ospreys each at 3 sites 8/29, 20 Sharpshins at Cadillac on 8/21, and 25 Broadwings at Chestnut Ridge on 8/24. This is hardly a catchy promo for summer watching.

It was sunny and warm the first three days of September, then five days of clouds and showers. The only “flight” was at Cadillac on 9/1 when 26 Osprey, 91 Sharpshin, 55 Broadwing, and 129 Kestrel went through (321 total). Three other day totals barely broke 100, though one of them, 9/8 at Hook, included 101 Osprey. This typical period of tantalizing but slow improvement failed as usual to provide any real movement. There were 140 watch days and 757 hours. The total numbers did not even reach 3000 birds and the per-hour rate was 3.9. There were almost equal numbers (600-700 each) of Osprey, accipiters, Broadwing, and falcons.

September 9-30

The weather broke with a front on 9/9 and the game was on. Broadwings broke 100 at six sites, led by Putney with 614. Winds stayed brisk, but veered from northwest to north on 9/10 when 20 watches counted over 100 Broadwings, led by 820 at Quaker and 624 at Montclair. Winds stayed north but were lighter on 9/11 when high clouds helped the counts. There were 300 or more Broadwings at 18 sites, led by 2500 at Clary Hill, Maine, and 2100 at Barre Falls. Then three days of light south

wind and summer warmth stalled the birds. They were counted, just not at any traditional southern watches. Little Round Top had three big days totalling 4338 Broadwings, Pack Monadnock had 2401 on 9/12, and Helderberg had 2052 on 9/13-14. There were only five other counts with more than 400 Broadwings. On 9/15 clouds slowly thinned and northwest winds took over. Those slow-moving birds hit Quaker hard (3116), but most sites struggled to find more than a few hundred and only three broke 1000. The next day, in a tricky end-around movement, the birds peaked at Quaker (5432), and in New Jersey at Chimney Rock (7164) and Montclair (4367). Six other sites in the south broke a thousand, but northern sites had trouble reaching half that. On 9/17 the wind turned southwest and the last of the first flight drifted back west over Picatinny (1473) and Wildcat Ridge (2621). At the same time, the next batch of delayed departers arrived in the north, 2500 at Pack Monadnock and 1800 at Mt Wachusett. The here today, gone tomorrow west winds took a big toll on the less common species. Lighthouse had 346 Sharpshins on 9/11 and 236 on 9/15. In between and after, the intermittent winds produced dribs and drabs. On 9/18 it was rain drops!!

Again it cleared with strong northwest winds, and again, the Broadwings took their cue. On 9/19 the eastern corridor did the best, especially Quaker with 3665 and Chimney Rock with 3081, but other decent totals up to 1600 Broadwings were recorded up and down the region. Those good numbers continued the next day, peaking around 1800 at Johnnycake and Picatinny. Winds were still not strong or prolonged enough to bring other species in large numbers. There were only a few scattered high Broadwing counts on 9/21-22, when winds turned south, and the same was true the next two days, when winds turned strong from the northwest. That was when accipiters and falcons finally reached coastal and near coast sites. The first day had the strongest winds giving Fire Island 242 falcons, while accipiters totalled 199 at Lighthouse and 150 at Chimney Rock. Winds died but remained northerly 9/24-25, spreading out the flights, then clouds stopped things entirely the following day. They resumed on 9/27, accipiters strongly despite light winds, peaking at over 200 at Harpswell and Quaker. They were getting impatient. Showers stopped them cold the next day and clouds kept them cautious the last two days of the month. The skies cleared and the wind picked up soon enough on 9/30 to give good numbers to Lighthouse, Quaker and State Line. There were 609 count days and 4077 hours of coverage. The nearly 200,000 migrants gave a total passage rate of 47 per-hour, about the average during the last seven years. Broadwings flew at a rate of 39 per-hour and all other species at 7.6 per hour.

October-November

The clear skies and northwest winds continued on 10/1, ignoring the change in the human calendar. Then followed three days of rain and clouds. Four days of this brought only 2500 birds at a rate of only 8 per-hour. Despite light winds on 10/5-7 there were signs of a big push in the wind. Clouds came overnight, then clearing and west winds, swelling the numbers. Over these three days and 451 hours there were 6818 migrants, a rate of 15 per hour. There were 3200 accipiters and 1200 each for falcons and Ospreys.

Light north winds continued 10/8-9, and accipiters put on a pretty good show. They made up half of the 6800 migrants counted in 285 hours of coverage, a rate of almost 24 per hour. A cloudy, showery day on 10/10 was a brief respite, but winds turned fierce from the west the following two days, enough to give watchers plenty to count, including a lot of Turkey Vultures. Over these four days 500 hours of watching produced almost 11,000 migrants a rate of 21.5 per hour. There were over 3200 vultures, 3500 Sharpshin, 700 Redtails, and 1350 falcons. All this came to an end with two days of rain 10/14-15.

The parade reformed on 10/16-17 as skies cleared and northwest winds howled. These two days the total was 6280, including over 3000 accipiters, 1000 big buteos, and 750 falcons. The fun stopped with the rain on 10/18 and the next day winds were southwest, still holding numbers down. On 10/21 another bout of big winds from the northwest renewed the flight, but it barely got going during a week of clouds and light winds. Migrants were evenly spread over 15 days, when there was 1150 hours of

watching. The 11,300 migrants were made up of about 4500 accipiters, 2200 vultures, almost 2400 big buteos, and almost 1000 falcons. The passage rate was just under ten per hour. October ended with another stretch of bad weather, three days with only 31 coverage hours and 76 migrants.

November 1 was only a bit better, but then winds howled from the northwest for four days. The flights were very good, but they might have been much better if the clouds and showers had not hung on as well. Over these four days the counts totalled just over 1000 for both accipiters and Redshoulders, while the Redtail total was nearly 3000. The passage rate over this stretch was 14.4 per-hour.

Over the next five days 350 Redtails and 100 Redshoulders straggled by, and the 843 total birds made a rate of 4.7 per hour. Believe it or not, after 11/5, sky watchers continued to count clouds and burn out their retinas for 621 hours. They added a measly and meaningless 1080 birds, 1.7 per hour.
